Initiating the Security Upgrade

Upon logging in, you will be redirected to a screen stating: "Your account is not registered." Do not be alarmed; this indicates you need to link your MFA device.

1. Download Google Authenticator from your mobile app store.
2. If you already have it, proceed immediately to the next step.

Your account is not registered.

Install [Google Authenticator](#)  on your mobile device.

Linking Your Device via QR Code

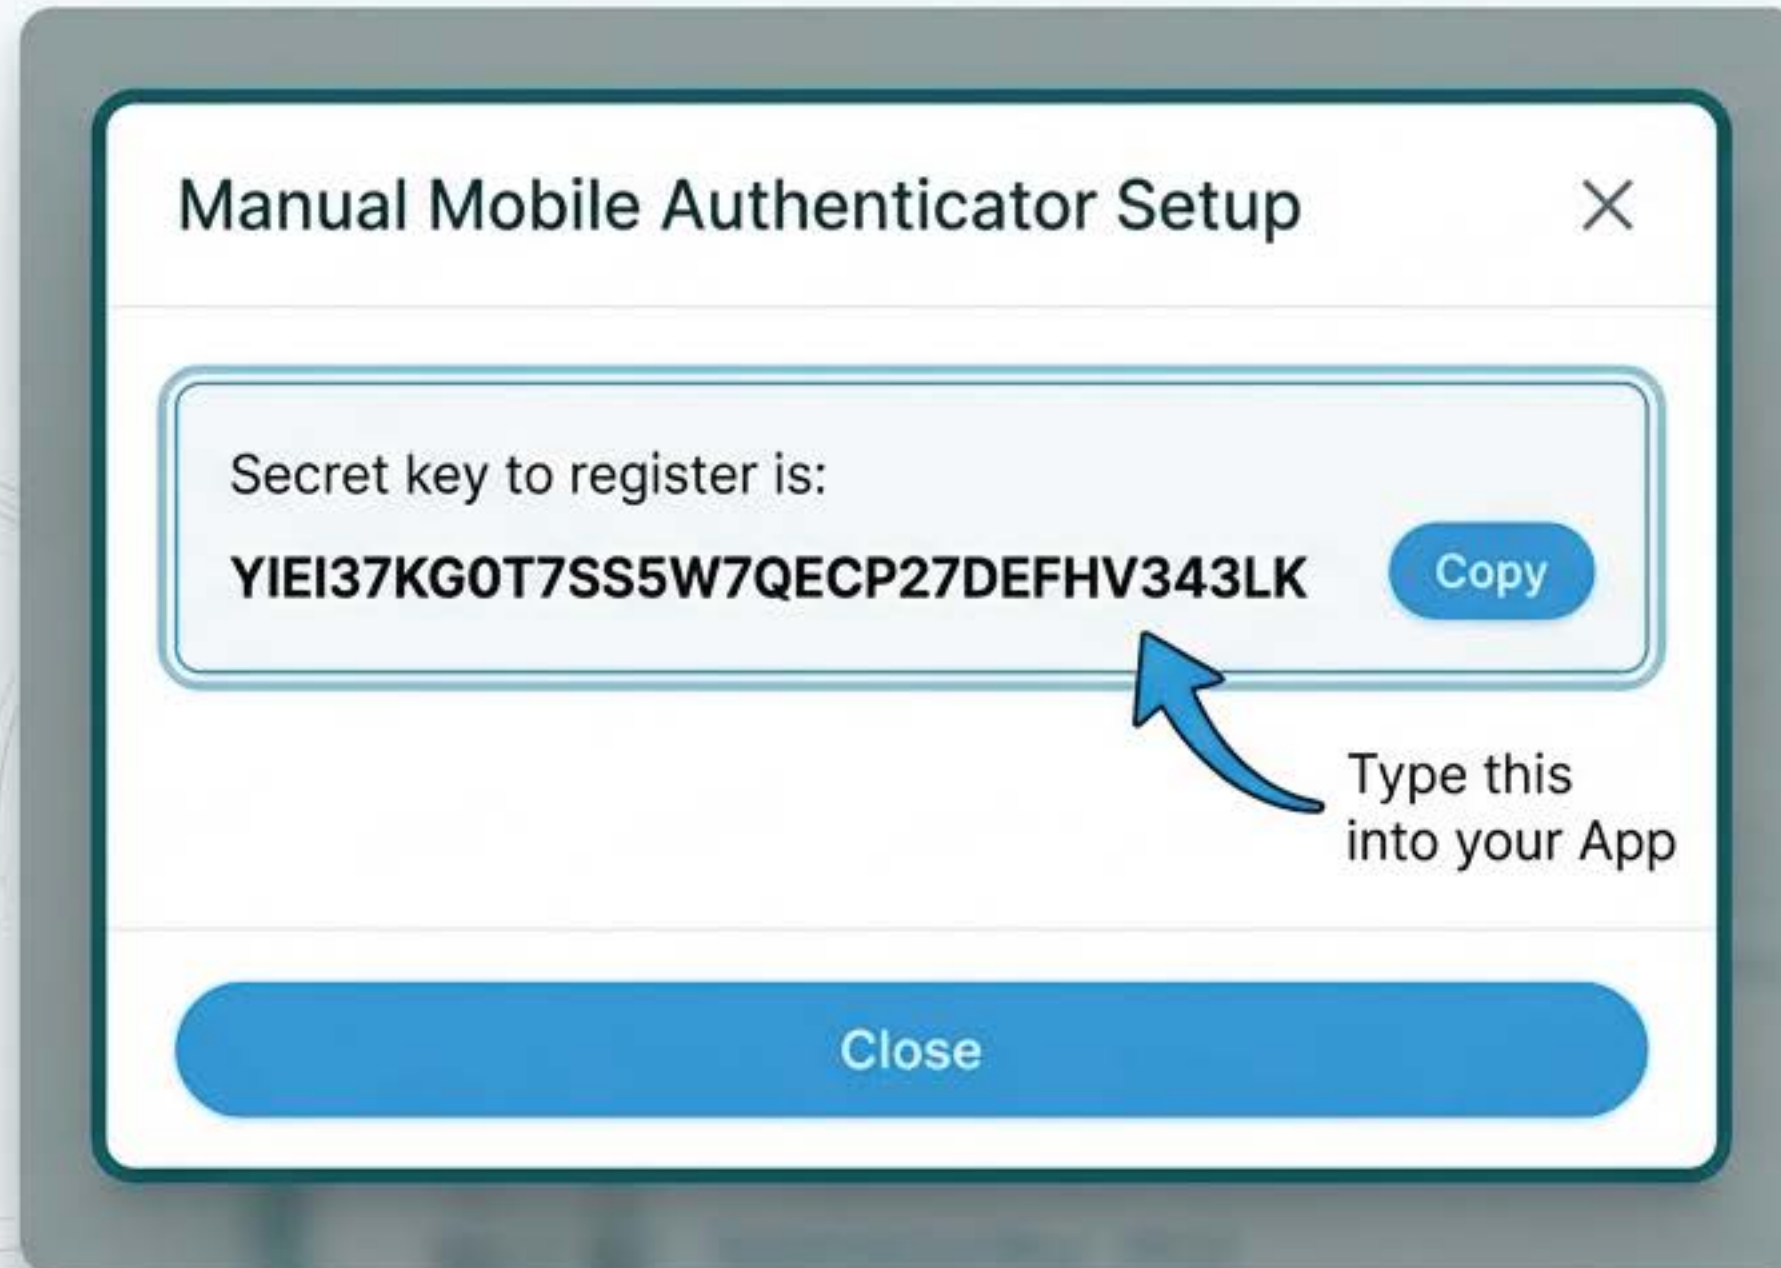

Open the Google Authenticator app on your phone. Tap the '+' icon and select 'Scan a QR code'.

Can't scan the QR code? Use manual entry instead

Troubleshooting: Manual Setup

If the camera scan fails, generate a text key manually.

CRITICAL: Save Your Scratch Codes

These are emergency backup codes. If you lose your phone, these are the **ONLY** way to access your account.

Scratch codes:

41188833

76800229

44571216

75526051

87374488

CANCEL

Verifying the Connection

Enter the 6-digit code from your Google Authenticator app to finalize the link.

Confirm Account Registration

Confirm your account registration by providing a token from the authenticator app on your device. Once the token is validated, your account registration will be finalized.

Token:*

Device Name:

trusting_austin

Authentication Successful

Log In Successful

You, `monard@`, have successfully logged into the Central Authentication Service. However, you are seeing this page because CAS does not know about your target destination and how to get you there. Examine the authentication request again and make sure a target service/application that is authorized and registered with CAS is specified.

When you are finished, for security reasons, please log out and exit your web browser.

MFA Setup Checklist

- Install Google Authenticator app downloaded.
- Scan QR Code or enter Key manually.
- Save Scratch codes (Printed or written down).
- Verify Token entered and device registered.

For security reasons, always log out and exit your web browser when finished.
